

Hello World

Módulo HTML5,CSS3 E JS

Flexbox

Flexbox

Ao usar `display flex` num elemento, todos os elementos que estão dentro daquele elemento, passam a ficar inline

```
div.container{  
    display: flex;  
}
```

Container flexbox tem dois eixos principais

Flex direction

Por padrão o flexbox dispõe os elementos ao longo do eixo principal.

Usando o `flex direction` podemos rotacionar esse eixo.

Valores para essa propriedade: `row` ou `column`

`Row-reverse` ou `column-reverse`

```
div.container{  
  display: flex;  
flex-direction: column  
}
```

Justify-content

Com o `justify-content`, é possível controlar como alinhar os itens no eixo principal

1. Flex-start
2. Flex-end
3. Center
4. Space-between
5. Space-around

Align-items

Com o align-item, é possível controlar como alinhar os itens no eixo transversal

1. flex-start
2. flex-end
3. center
4. stretch
5. baseline
